

# Meeting\_2 Summary (20-Nov-2024)

- **Mode:** In-Person
- 

## Discussion Summary

### 1. Overall Progress

- Progress is on track with a good primary interface design.

### 2. Literature Review

- Begin drafting the literature review.
- Research and summarize the following:
  - Two papers on existing works related to the project.
  - Two papers on recommendation systems:
    - One focusing on collaborative filtering (item-based).
    - One focusing on machine learning approaches.
  - One paper on database design structure, particularly for login functionality.

### 3. Wireframes

- Develop wireframes for key application features and workflows.

### 4. Project Management

- Utilize GitHub effectively for project management.
  - Maintain version control, track tasks, and ensure documentation is up to date.
- 

## Next Steps

- Draft the literature review with the identified focus areas.
  - Research and document relevant papers.
  - Create detailed wireframes for the application.
  - Organize and manage project files and tasks on GitHub.
-
